

CHILD SAFETY

We take child safety very seriously that is why all our blinds are supplied with the appropriate Child Safety device. As part of our compliance to BSEN 13120:2009 + A1:2014 regulations, and to make sure that our blinds are out of reach of children, all the chains and cords provided with our products will be made at a maximum length of one meter.

Furthermore, if a child or vulnerable person is likely to be using the room where the blind is installed, you **MUST** fit the safety device we provide in order to tie up the pull cord safely out of the way of children, vulnerable persons and pets. Operating chains must be higher than 1.5m from the floor and secured with the supplied cord tension device.

Even when the safety device is fitted, we recommend that you move beds, cots and furniture away from any window.
